PERSONAL STATEMENT

I am a Software Engineer working on web development and UI/UX enthusiasts. I develop functional and elegant applications with maintainable code base. I would like to use open source tools and libs/plugins to accomplish my task. I obey Agile development methodologies which lead to lean software development.

I am an open minded person very eager to work in a team environment where different ideas are collaborating to solve a problem.

I am a perfectionist and hard worker, always expect quality even in a small task/work. And I feel satisfied with the end result of my work when the client says "this is what I needed".

I am a quick learner, always like to learn and adapt new technologies/methodologies to keep my product's market standard. And I believe in Open Source technologies, which is the best way to share our knowledge and to build great software.

WORK EXPERIENCE

Zapnet Computers – Adyar, Chennai.

Designation: Hardware Engineer

Duration: May 2008 – April 2009 (1 year)

Responsibility: It's mid-scale computer company based in Adyar. Which had browsing center, gaming center, gaming consoles sales and PC hardware sales & service units.

My responsibility was to purchase hardware components and gaming consoles. Auditing daily accounts and browsing charge billings. Maintaining gaming PCs and to rectify hardware faults. Assembling new PCs, Installing Graphics cards for client PCs and to install OS and device drivers.

Burning Glass Technologies – Dharmapuri, Tamil Nadu.

Designation: Software Engineer

Duration: June 2013 – Now (1 year 11 months)

Responsibility: As a Software Engineer I am working on a web based application called "Labor/Insight" which provides comprehensive employment data for different Geo locations (US, UK, CAN, SGP and ANZ).

We are following Kanban (Before Scrum) methodology of software development where requirements will come from Product Managers, Clients and Research Team as tickets (in JIRA).

Where my job is to work on new feature request, bug fixes, maintaining the feature compatible with cross platforms (mobile & tablets) and cross browsers and support the feature after deployment.

▸ *Location Quotient:*
It's a major feature (report) I've worked on and which was already provided by our competitors. It tells about how much one industry/occupation concentrated in a particular location in the US or how much an industry/occupation bring economic value to a particular location and details are [here](). In Q4 2014 I worked and delivered this new report.

SKILLS

Web Technologies: HTML, CSS, JavaScript, AJAX, jQuery, Knockoutjs, less, gulpjs, Wordpress, Bootstrap and Jasmine

Programming Language: JavaScript, C# and SQL

Design Patterns: MVC and MVVM
